Rank tracker

We support 6 search engines:

- Google (all locations supported)
- Bing (all locations supported)
- Yahoo
- Yandex (all locations supported)

- Breathtaking speed and accurate results
- Flexible schedule for ranking reports
- Tracking competitors
- Landing page monitoring
- Snippets grabbing
Keyword research tool

Get new keyword ideas from all available sources

We support the following sources:

- Google Adwords (Keyword planner)
- Bing Webmaster Tools (Keyword Research Tool)
- Yandex.Direct (Yandex.Wordstat)
- Google Search Console
- Yandex Webmaster
Snapshots Tool: Track the whole SERPs

Search results snapshot is a replica of search results displayed by a search engine in response to a keyword query. Snapshots Tool tracks all of the Top 100+ results for keywords you selected instead of traditional rank trackers that track a single URL throughout the Top 100 results.

Get Snapshots of all supported search engines. Enjoy full support of locations, languages, top country-level domains, Desktop (PC) and Mobile search of Google and Yandex (limited support of Bing, go.Mail.ru, and Sputnik).
Keyword suggestions are search predictions of popular keywords beginning with the same letters and related to the phrase you are typing in the search box. Search suggestions are based on frequent searches of other people and the content of web pages.

We grab keyword suggestions from all the most popular search engines:
Keyword Clustering Tool

Automated grouping of your keywords

Clustering is based on TOP-10 of search results. It has proven to be an extremely powerful tool to get a comprehensive keyword structure for every page of your site. Grouping is an easy way to learn how to make your website keyword-rich to run up to a top-rate SEO performance.

Why try it?

Merging a huge pool of keywords into small groups is a time-consuming and formidable task even for savvy marketers. We rescue you from lots of accidental errors and headaches and save your precious time by doing the whole thing for you on auto-pilot.

- Robot generates and sends automated queries to search engines and then matches webpages from search results to each keyword.
- A minimum number of matches (clustering degree) required to trigger clustering of keywords is customizable and can be set in settings.
- Keywords that revealed no matches in TOP-10 of search results are banded up together in a separate group named "Stray keywords".
- Robot generates and sends automated queries to search engines and then matches webpages from search results to each keyword.
Our automated auditor tools scan webpages to reveal broken links, duplicates, redirects, empty or missing tags, loading errors and server error codes. Examine your website to detect possible issues with indexing, internal and external links, titles, meta-tags and pictures.

Make sure that pages of your site are not only user-friendly but handy for crawlers as well.
Other tools

**PPC Bid Manager**
Automated management of ad campaigns.

**Index status checker**
In Google, Bing, Yahoo and Yandex search engines.

**Search volume tracker**
The number of searches that occur for a particular search during a specified time such as one month.

**Sitemap generator**
Generate a sitemap, figure out the last time pages were updated, frequency of page updates and priority against other pages.

**Website Watcher**
Track website changes on auto-pilot.
Keep all your projects at hand!

Research keywords, track rankings, crawl and analyze your websites whenever and wherever. Savvy marketers, web analysts and SEO consultants, experts and novices track SEO progress with Topvisor worry-free.
